How This Program Works (프로그램 사용법)

This is a 4-week HYROX training program built to take you from a solid training base into race day. Each training day includes three tracks:

이 프로그램은 탄탄한 기초 체력에서 레이스 당일까지 이어주는 4주 HYROX 트레이닝 프로그램입니다. 각 훈련일은 세 가지 난이도로 구성되어 있습니다:

- Advanced — full prescribed volume, load, and pacing. Best for athletes with an established training base and HYROX or CrossFit experience.
- 고급(Advanced) — 제시된 볼륨, 중량, 페이스를 그대로 수행합니다. 탄탄한 훈련 기반과 HYROX 또는 크로스핏 경험이 있는 분들에게 적합합니다.
- Intermediate — moderate volume and intensity, scaled back by ~30–40% from Advanced. Ideal for athletes with some training experience.
- 중급(Intermediate) — 고급 대비 볼륨과 강도를 약 30–40% 낮춘 수준입니다. 어느 정도 훈련 경험이 있는 분들에게 적합합니다.
- Beginner — reduced volume, distance, and/or load. Same movements and intent dialled back so you can complete each session with good form and confidence.
- 초급(Beginner) — 볼륨, 거리, 중량을 낮춘 버전입니다. 동일한 동작과 목적을 유지하면서 좋은 자세와 자신감으로 세션을 완료할 수 있도록 강도를 낮췄습니다.

Pick the track that matches your current fitness — not your goal fitness. It's fine to run Intermediate one day and advanced the next depending on how you feel.

목표로 하는 체력 수준이 아니라 현재 자신의 체력 수준에 맞는 난이도를 선택하세요. 그날그날 컨디션에 따라 하루는 중급, 다음 날은 고급으로 진행해도 괜찮습니다.

This is a generic 4-week program — it can't account for your exact training history, recovery capacity, or equipment access, so use your judgment throughout:

이 프로그램은 범용적으로 설계된 4주 프로그램으로, 개인의 정확한 훈련 이력, 회복 능력, 장비 접근성까지 반영할 수는 없습니다. 따라서 전 과정에서 본인의 판단을 활용하세요:

● If intensity feels too high and you're not recovering between sessions, dial back — reduce load, pace, or volume rather than pushing through. 강도가 너무 높게 느껴지고 세션 사이에 회복이 잘 안 된다면, 무리해서 밀어붙이기보다 중량, 페이스, 볼륨을 낮추세요.

● If the volume feels too low relative to what you're used to, consider adding a double days — most safely an easy double day (a second easy aerobic session), or a double threshold day (one additional session at LT1 or LT2 effort). 평소 훈련량에 비해 볼륨이 너무 적게 느껴진다면 더블 데이(하루에 두 번 훈련)를 추가하는 것을 고려해보세요 — 가장 안전한 방법은 이지 더블 데이(추가 유산소 세션)이며, 또는 더블 임계치/역치 세션(LT1 또는 LT2 강도의 세션을 하나 추가)도 가능합니다.

Weekly Structure (주간 구성)

Week 4 breaks this pattern to taper you into race day — see below.

4주차는 레이스 당일을 위한 테이퍼링(감량 조정) 기간으로 이 패턴과 다르게 구성됩니다 — 아래 참고.

NOTE

this program is only 4 weeklong which is a very short time to prep for a HYROX race, which is why the program is very HYROX specific, longer programs will involve more isolated running workouts and general strength work, whilst this program is very HYROX specific.

참고

이 프로그램은 단 4주로, HYROX 레이스를 준비하기에는 매우 짧은 기간입니다. 그렇기 때문에 프로그램 전체가 HYROX에 매우 특화되어 구성되어 있습니다. 더 긴 프로그램이라면 러닝만 따로 훈련하거나 일반적인 근력 운동을 더 포함하겠지만, 이 프로그램은 HYROX에 매우 특화되어 있습니다.

Reference: Standard Warm-Up (참고: 기본 워밍업)

Use this before every running session unless a different warm-up is specified:

모든 인터벌 러닝 세션 전에는 별도의 워밍업이 따로 명시되어 있지 않은 경우, 아래 워밍업을 실시하세요.

- 10-minute easy jog to loosen up
- Stretch and mobility work + movement prep
- 1-minute hard-effort run to spark the system
- Rest 60 seconds
- 4 × 20-second strides at threshold-to-fast pace, 30 seconds rest between (focus on building speed and control with each rep)
- Rest 2–3 minutes, then start the workout

Reference: Pacing & Load Cues (참고: 페이스 및 중량 기준)

- Zone 2 (Z2): easy, fully conversational pace 가볍고 대화가 가능한 편안한 페이스 (60%-70% max HR)
- Zone 3 (Z3): moderate/tempo — comfortably hard 중간 강도/템포 — 약간 힘들지만 감당 가능한 수준 (70%-80% max HR)
- Zone 4 (Z4) / Threshold: hard, sustainable for the prescribed interval, RPE 7–8 임계치(Threshold): 힘들지만 제시된 인터벌 동안 유지 가능한 강도, RPE 7–8 (80%-90% max HR)
- "Hyrox Race weight" / "competition weight" means the sled load, wall ball weight, and farmer's carry load you plan to use (or expect to use) on race day 레이스 당일 사용할 무게

Don't Know Threshold pace (LT2 pace)?

젯산 역치 페이스(LT2 페이스)를 모르시나요?

For most runners, this effort level falls right between 10K and half marathon race pace

대부분의 러너에게 이 강도는 10K와 하프 마라톤 레이스 페이스 사이에 해당합니다

NOTES

This is a threshold effort (Z4) workout meaning that the RPE should feel like 8/10, hard challenging but not unsustainable, think about it as if someone asked you to do another set, you should be available to do another.

이 세션 강도는, 체감 강도(RPE)가 8/10 정도여야 합니다. 힘들지만 지속 불가능한 수준은 아니어야 하며, 누군가 세트를 하나 더 하라고 한다면 할 수 있는 정도로 생각하세요.

쿨다운 5-10min bike

Sunday — Rest (일요일 — 휴식)

Week 4 — Taper & Race Week

[← Contents](#)

shed fatigue while keeping your legs sharp. Volume and intensity drop significantly (30%-50%) — trust the taper.

피로를 덜어내면서도 다리는 예리하게 유지합니다. 훈련량과 강도가 큰 폭으로 줄어드니 (30-50%) 테이퍼링을 믿으세요.

Monday — Easy Run

- 45-minute easy Zone 1-2 run

ADV · 고급

- 30-minute easy run

INT · 중급

BEG · 초급

NOTE

참고

에르그나 바이크 유산소도 괜찮습니다

Tuesday — Strength Taper

NOTES

Keep effort controlled. This is about staying sharp, not building fatigue this close to race day.

참고

강도를 통제하세요. 지금은 컨디션을 예리하게 유지하는 것이 목적이며, 레이스가 가까운 시점에 피로를 쌓으면 안 됩니다.

Wednesday — Tune-Up Session (튠업 세션)

Intention: Short race-pace efforts to sharpen speed and movement efficiency without adding fatigue.

Friday — Rest or Shakeout

Intention: Full rest or an easy shakeout run — whichever leaves you feeling best heading into race day.

- Option 1 — Full rest: no structured movement today.
- 옵션 1 — 완전 휴식:
- Option 2 — 15-20 minute easy shakeout run, finishing with 3-4 × 15-20 sec relaxed strides if you typically feel better after moving.
- 옵션 2 — 15-20분 가벼운 셰이크아웃 러닝, 몸을 움직인 후 컨디션이 더 좋아지는 편이라면 마지막에 3-4 × 15-20초 편안한 스트라이드를 추가하세요.

NOTES

Choose whichever option leaves you feeling fresh, not fatigued, for tomorrow.
